Assignment Marking Scheme

Category	Description
Revise (<50%)	Assignment demonstrates a lack of understanding of at least some of the key concepts, and misses the point of what is expected of the assignment. Half, or more, of the assignment has been **misunderstood**, and requires revision in order for the candidate to fully understand the concepts of the module. Assignments that fall into this category may also be **incomplete**, with evidence of questions that have not been attempted.
Pass (50-80%)	Assignment demonstrates a **solid grasp** of the material, where the code written achieves the correct result for at least 50% of the questions. Assignments in this category are **complete**, with no questions left unattempted, and reflect a solid grasp of the core concepts of the material covered in the module.
Distinction (≥80%)	Assignment demonstrates a **fluent**, **complete** understanding of at least 80% of the material, with code written as demonstrated across the module's learning materials. Where required, the candidate has also demonstrated evidence of a synthetic understanding of relevant concepts across the wider course material. Assignments in this category are **complete**, with no questions left unattempted, and reflect a fluent grasp of all the concepts explored in the material of this module, and beyond.

To be completed by marker:

Grade (Revise/Pass/Distinction):	Distinction
General Feedback:	Student demonstrated a strong understanding of all the materials in the chapter. The code has been written elegantly. The final project also demonstrated the candidate has a synthetic understanding of relevant concepts across the wider course material. Well done!
Marker Initials:	W.L.
